Amendments to the Abstract:

Please delete the current Abstract in its entirety and replace with the following replacement Abstract. A separate replacement abstract sheet is attached for your convenience.

An applicator head for a device with an air suction source for applying individual flat materials elements to objects. The applicator head has an applicator surface in air communication with the air suction source and has perforatable, weak locations. The weak locations can be selectively perforated and, when perforated, a weak location can function as a suction intake opening.

ABSTRACT

An applicator head for a device with an air suction source for applying individual flat materials elements to objects. The applicator head has an applicator surface in air communication with the air suction source and has perforatable, weak locations. The weak locations can be selectively perforated and, when perforated, a weak location can function as a suction intake opening.
